**26<sup>th</sup> September - 1<sup>st</sup> October 2023, Zagreb Fair**

# Open call for the ArhiBau.hr 2023 scientific conference

Dear colleagues,

Zagreb Society of Architects is inviting experts of various profiles to participate in ArhiBau.hr 2023 conference with a presentation displaying their own scientific research relevant to the topic. The scientific conference is part of the ArhiBau.hr 2023 - fair of the building culture and sustainable development – which represents one of the largest construction fairs in the region organized by the Zagreb Society of Architects (DAZ). This year's fair is being held in synergy and unison with fairs Ambienta, Zagreb Design Week and Art Zagreb, from 26th of September to 1st of October 2023 in the Zagreb fair.

The central ArhiBau 2023 theme - Future's habitat / Habitat's future - raises the question of how spaces will develop to meet the needs of a dynamic and changing world and what strategies in architecture, urbanism, spatial planning, design and construction can be applied to shape sustainable, functional and more resilient spaces. The two-day program of the conference (September 28 - 29) will bring together architects, urban planners, construction engineers and various other experts interested in the future of living spaces and the role that architecture will play in shaping the world of tomorrow.

We invite experts willing to participate in the ArhiBau.hr 2023 scientific conference to submit their scientific work within the aforementioned theme.

After reviewing the received abstracts, the scientific board of ArhiBau.hr 2023 will get back to you.

Afterwards, key research findings should be delivered as brief lectures in powerpoint (lasting 15 - 20 minutes) that will be presented at the conference. Alternatively, key research findings can be presented in the form of the poster.
