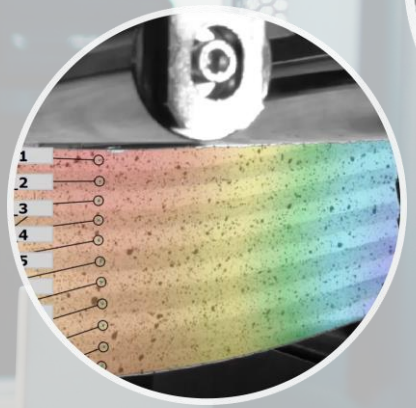
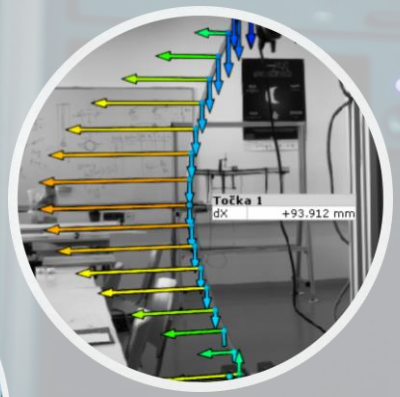
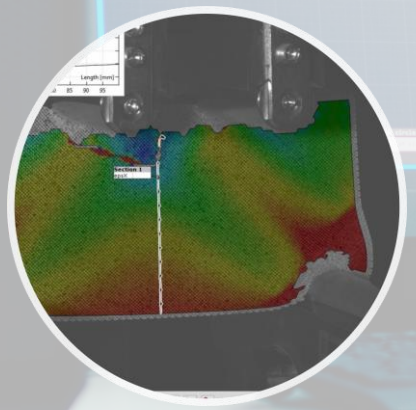
PROGRAM **MIKROKVALIFIKACIJE:**

PRIMIJENJENA MEHANIKA U SUVREMENOJ INŽENJERSKOJ PRAKSI







Sveučilište u Rijeci
Građevinski fakultet

PROGRAM **MIKROKVALIFIKACIJE:**

PRIMIJENJENA MEHANIKA U SUVREMENOJ INŽENJERSKOJ PRAKSI

diplomski studij
Građevinarstvo
smjer **Konstrukcije**

4 izborna predmeta
u 2. semestru

može se slušati na
engleskom jeziku
(preporučljivo)

stjecanje
znanja, vještina i kompetencija
+
nove mogućnosti zapošljavanja

može se upisati kao
program cjeloživotnog učenja
(dostupan onima koji nisu studenti)

izdavanje
potvrde o završenom programu

G F
Sveučilište u Rijeci
Građevinski fakultet

Diplomski sveučilišni studij GRAĐEVINARSTVO

Smjer: **KONSTRUKCIJE**

- I. Semestar
- **II. Semestar**
- III. Semestar
- IV. Semestar

Obavezni predmeti

- Čelične konstrukcije
- Drvene konstukcije
- Dinamika konstrukcija

Izborni predmeti

PRIMIJENJENA MEHANIKA U SUVREMENOJ INŽENJERSKOJ PRAKSI

- Stabilnost konstrukcija
- Plošni nosači
- Energetske metode u primijenjenoj mehanici
- Uvod u modeliranje plastičnosti i oštećenja

Stabilnost konstrukcija

Stabilnost konstrukcija

[15]

[16]

[17]

Postoji praktična potreba za analizom sigurnosti po pitanju nestabilnosti izazvanih kombinacijom geometrije konstrukcije i unutarnjih sila.
U tu svrhu razvila se nova disciplina – **stabilnost konstrukcija**.

Stabilnost konstrukcija

Teorija

Problem geometrijske nestabilnosti izražen je pomoću unificiranih diferencijalnih jednadžbi koje su rezultat kombinacije kinematičkih i materijalnih izraza, te jednadžbi ravnoteže.

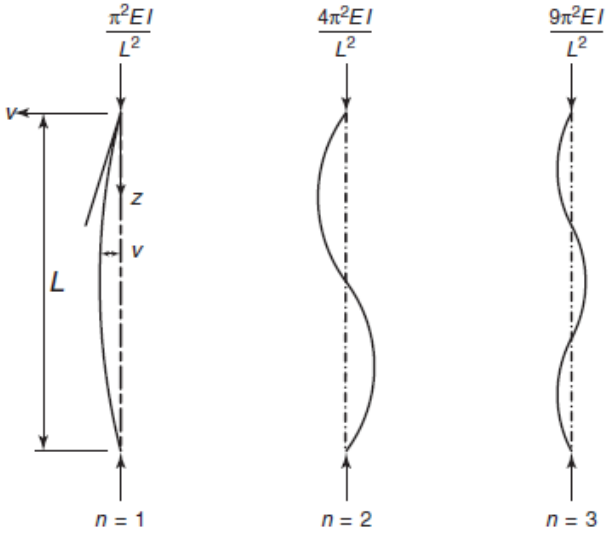

Fig. 2.5 Mode shapes of buckled column. [19]

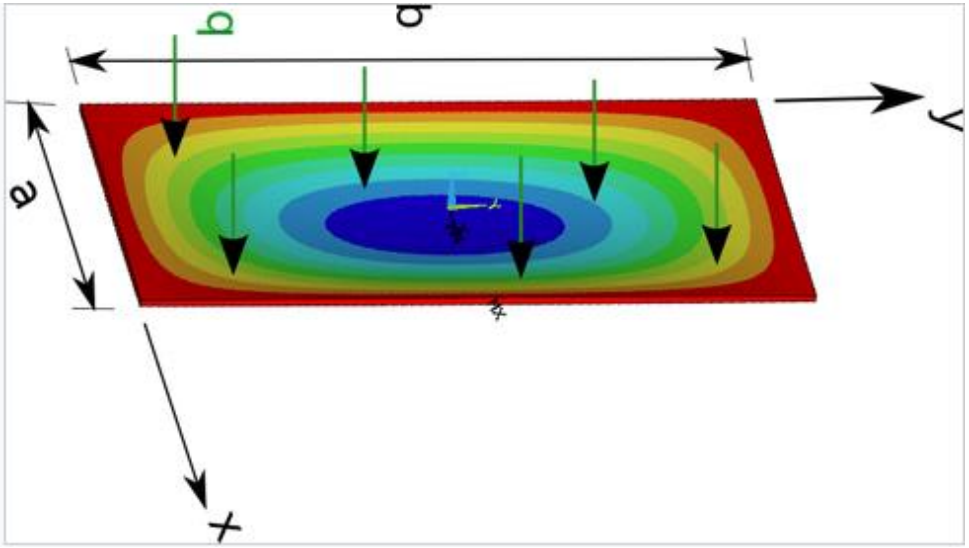
$$\frac{d^4 w}{dx^4} + \frac{P}{EI}\frac{d^2 w}{dx^2} = \frac{q}{EI}$$



[18]

$$\frac{\partial^4 w}{\partial x^4} + 2\frac{\partial^4 w}{\partial x^2 \partial y^2} + \frac{\partial^4 w}{\partial y^4} + \left(\frac{n_x}{D}\frac{\partial^2 w}{\partial x^2} + 2\frac{\tau_x}{D}\frac{\partial^2 w}{\partial x \cdot \partial y} + \frac{n_y}{D}\frac{d^2 w}{dy^2} \right) = \frac{q}{D}$$

Leonhard Euler
(1707 – 1783)
mathematician

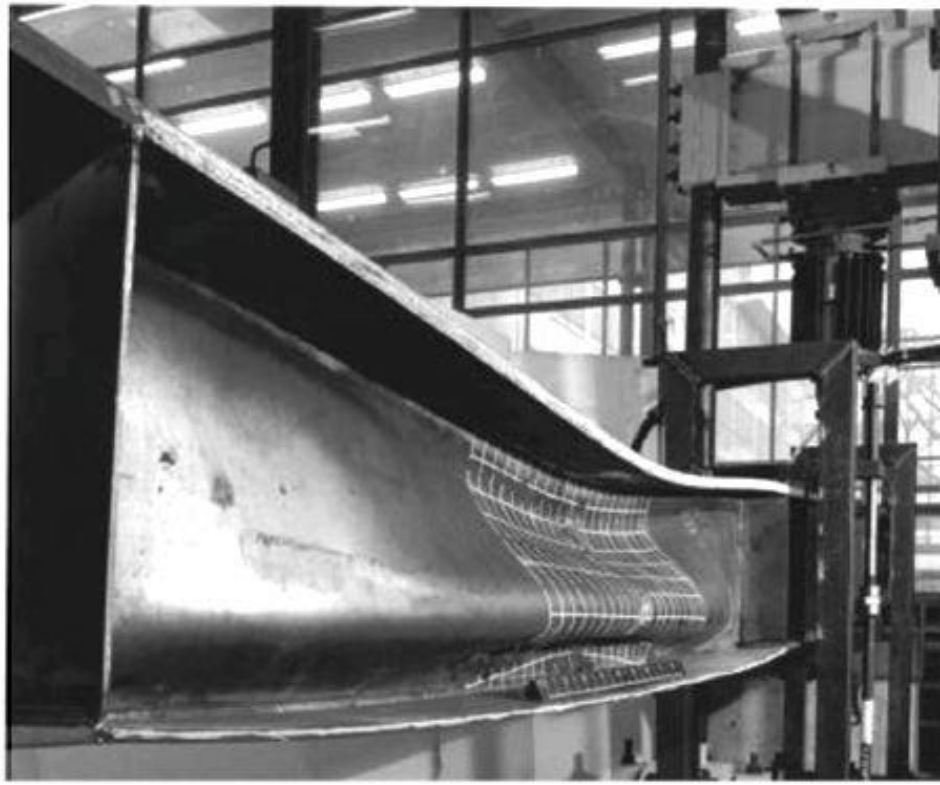
[20]

Stabilnost konstrukcija

Eksperimenti

Eksperimentalna postavka modelira praktični problem i potvrđuje teorijske rezultate.

[21]



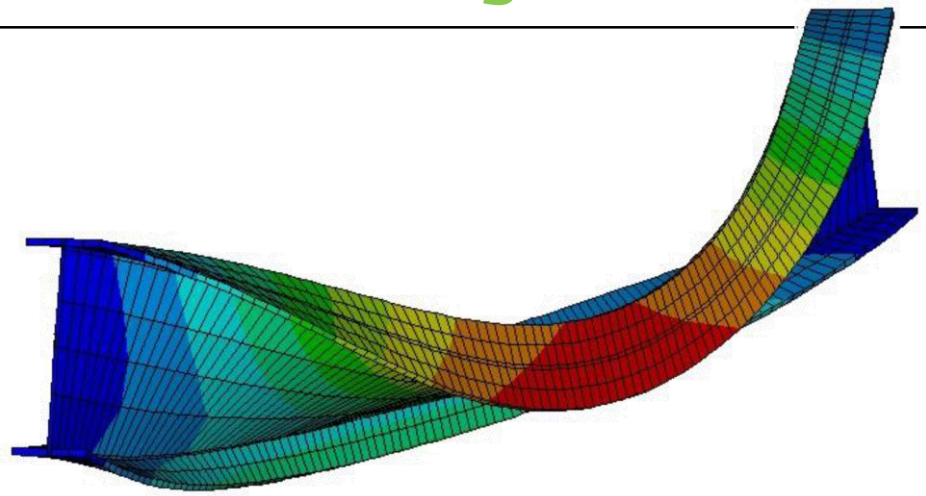
[14]

Figure 2. Vertical web buckling.

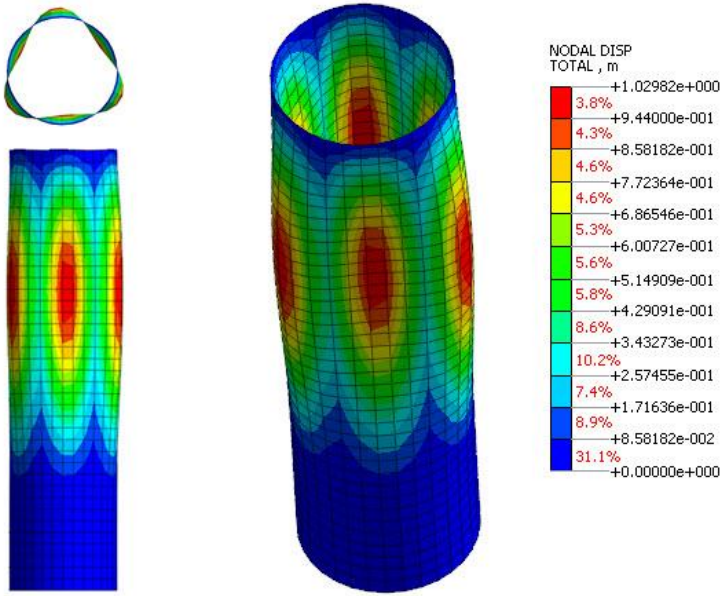
Stabilnost konstrukcija

Numerička rješenja

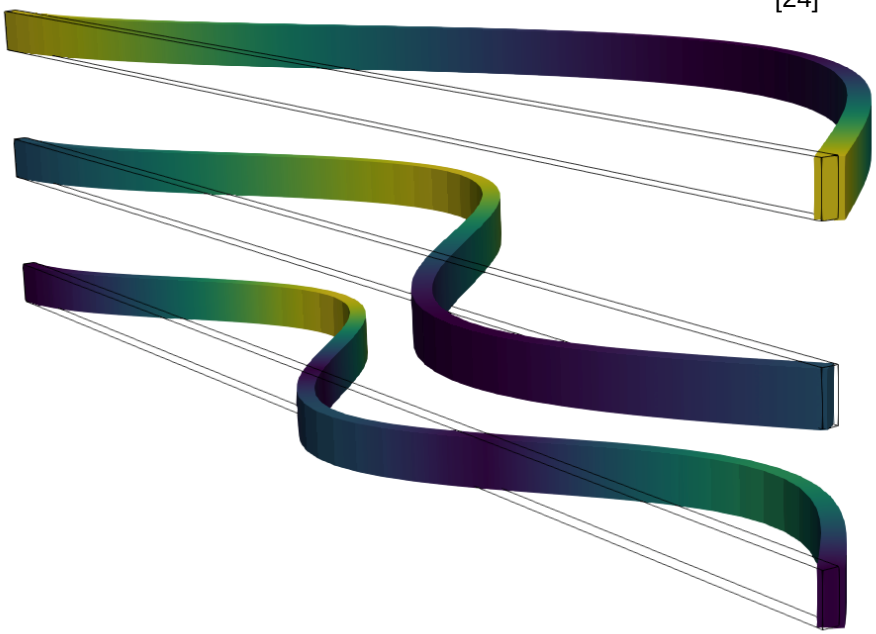
Numeričkim metodama mogu se riješiti kompleksni praktični problemi.
Najčešće korištena je Metoda konačnih elemenata.



[23]



[22]



[24]

Plošni nosači

doc. **Edita Papa Dukić**
edita.papa@uniri.hr
G-329

Plošni nosači

[26]

[27]

[60]

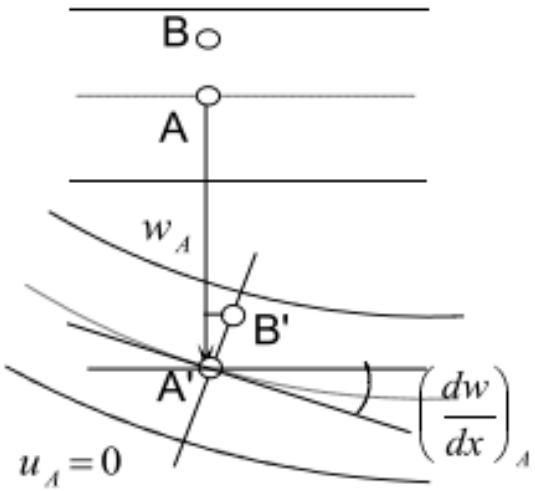
[28]

Različiti tipovi plošnih nosača u građevinarstvu: **stijene, membrane, ploče i ljuske.**

Plošni nosači

Koja je razlika između **grednih** i **plošnih** nosača?

Gredni nosač

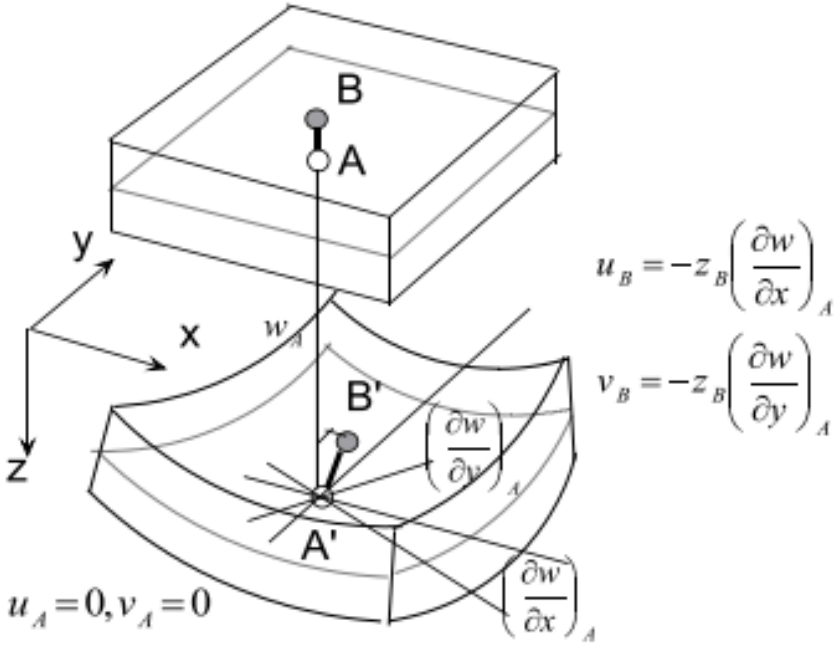


$$w_B = w_A$$

$$u_B = -z\left(\frac{dw}{dx}\right)_A$$

Pomaci svih točaka određeni su pomacima neutralne osi

Ploča



Pomaci svih točaka određeni su pomacima neutralne **ravnine**

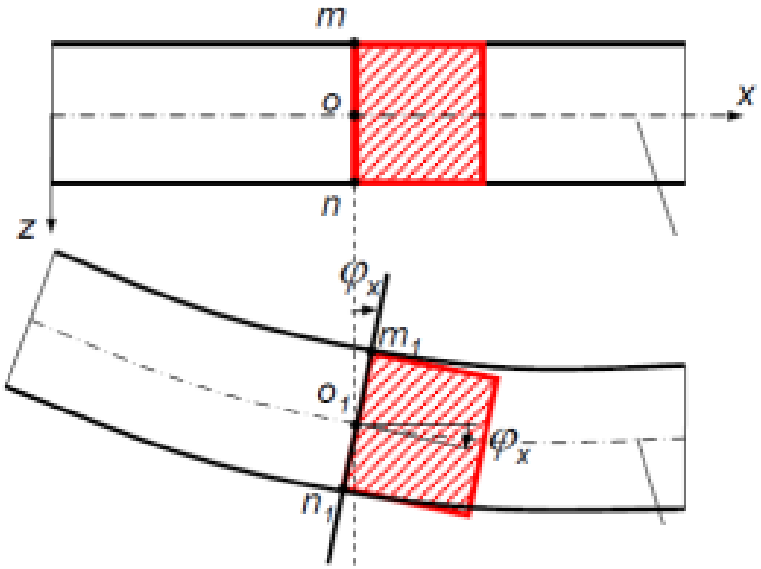
Plošni nosači

Po čemu se razlikuju **tanke** i **debele (visoke) ploče**?

Bernouli I + II: Kirchhoff

$$\varphi_x = \frac{\partial w}{\partial x} \qquad \varphi_y = \frac{\partial w}{\partial y}$$

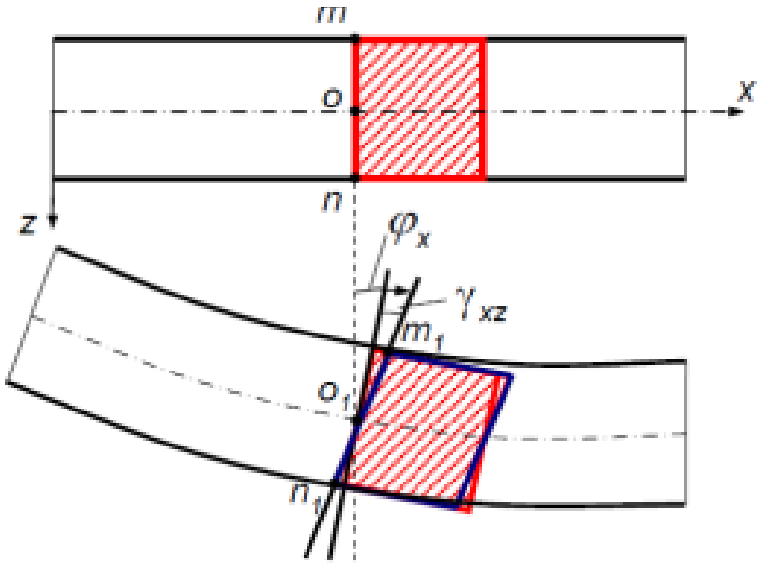
Posmična deformacija se zanemaruje



Bernouli I: Reissner-Mindlin

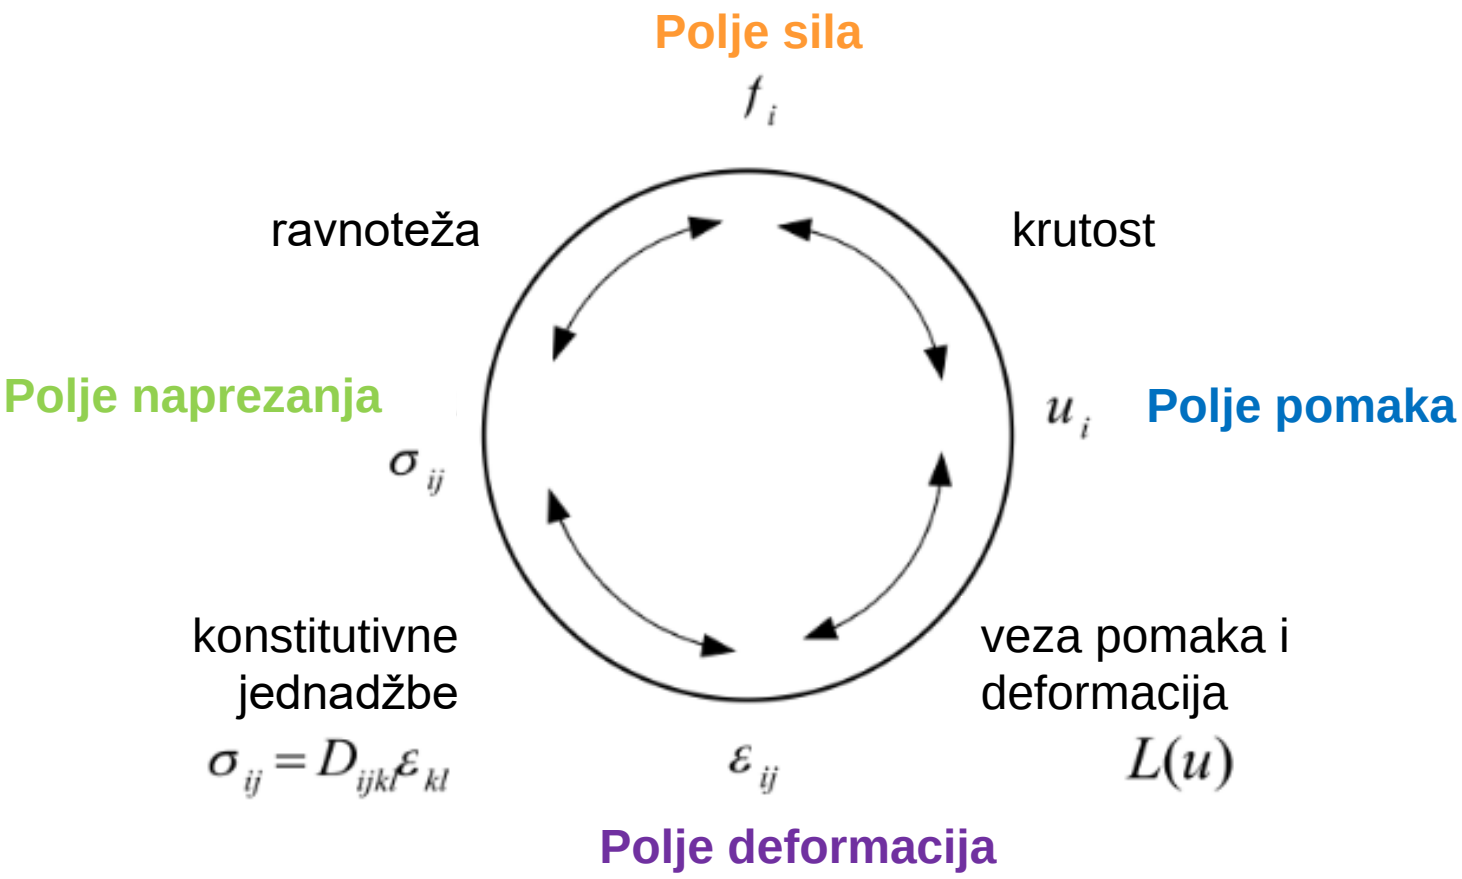
$$\varphi_x = \frac{\partial w}{\partial x} + \gamma_{xz} \qquad \varphi_y = \frac{\partial w}{\partial y} + \gamma_{yz}$$

Posmična deformacija se **NE** zanemaruje



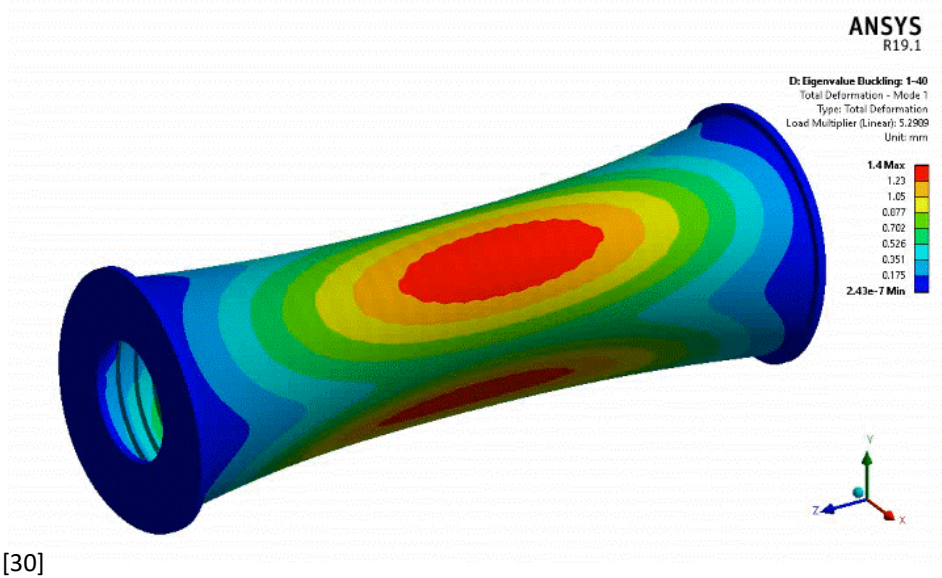
Plošni nosači

Kako su povezani **sila**, **pomak**, **deformacije** i **naprezanja**?

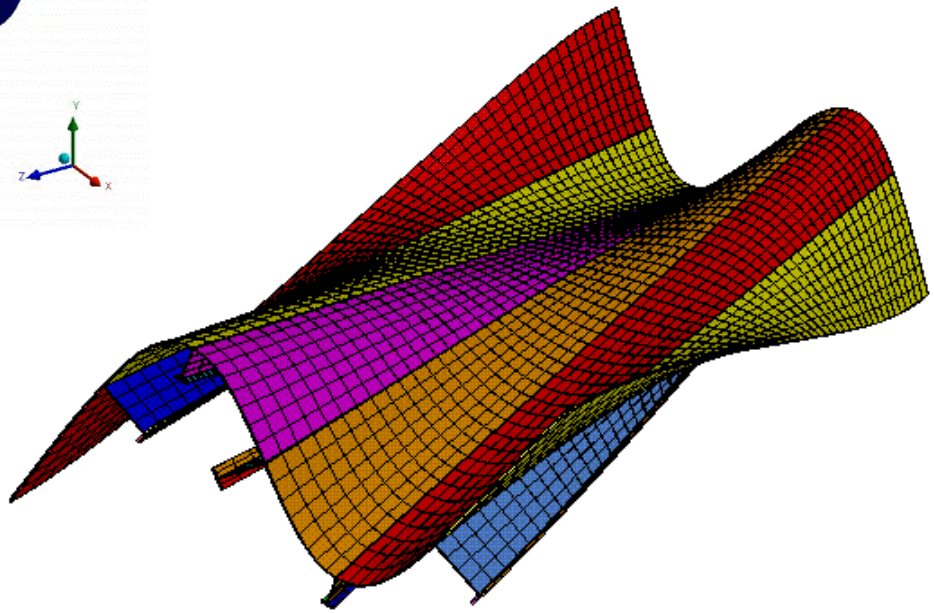


Plošni nosači

Upoznavanje sa numeričkim procedurama za statičku i dinamičku analizu plošnih nosača – **metoda konačnih razlika**, **Rayleigh-Ritz metoda** te **metoda konačnih elemenata**.



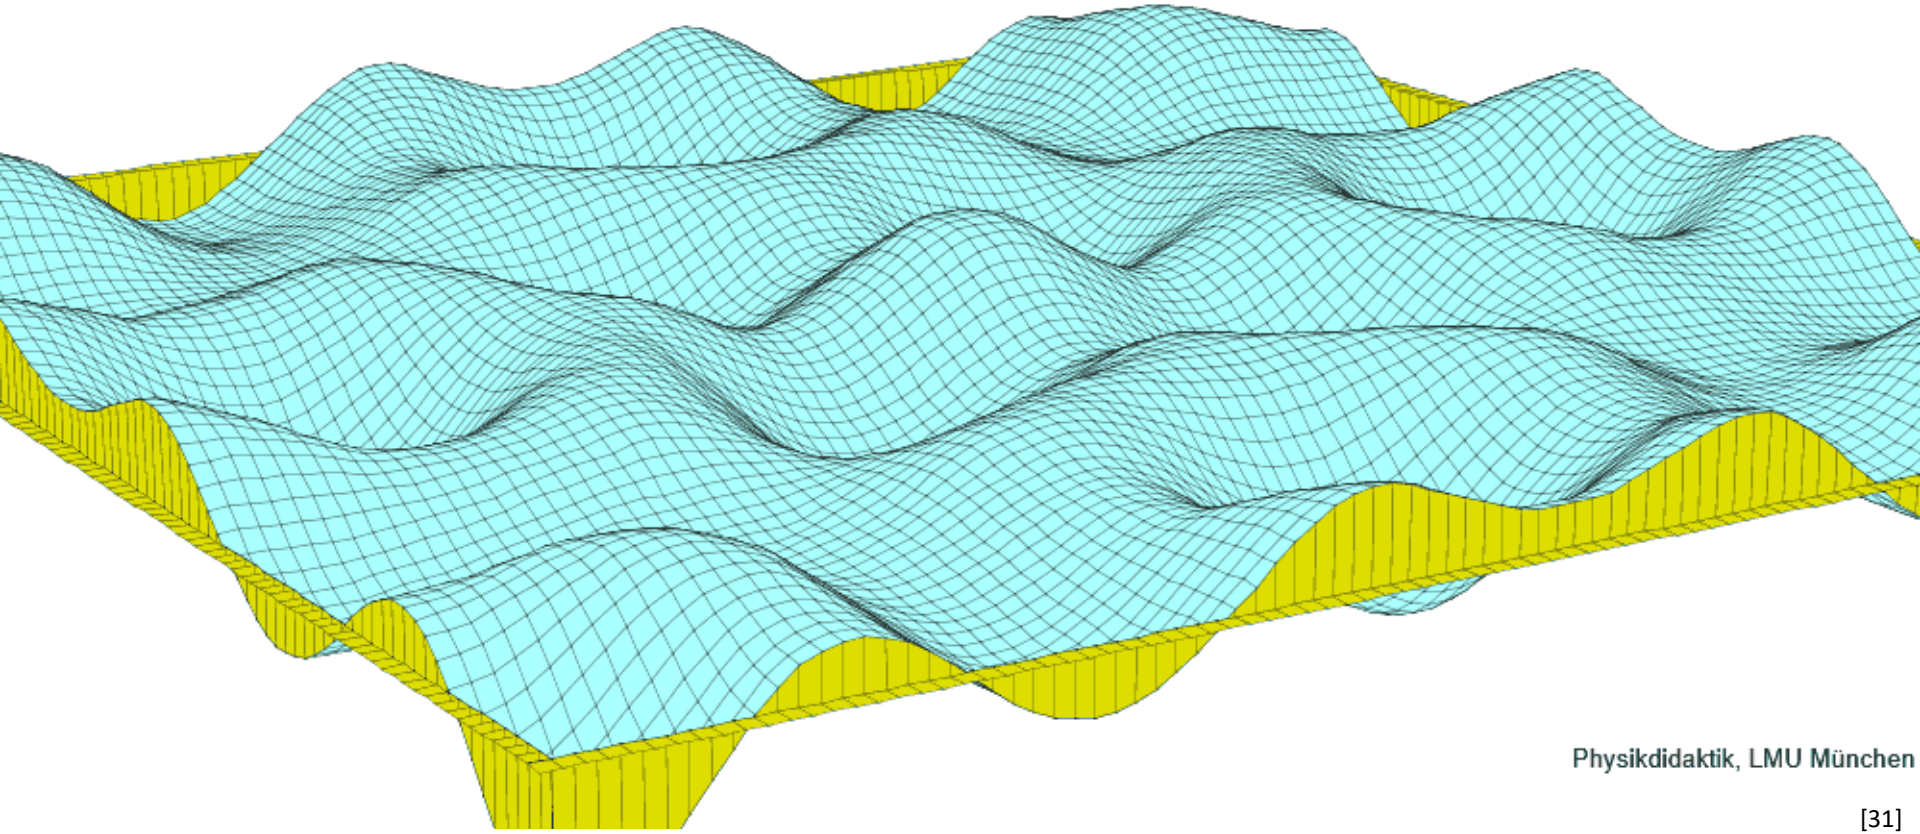
[30]



[29]

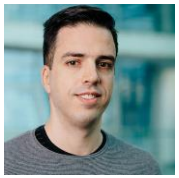
Plošni nosači

Upoznavanje sa numeričkim procedurama za statičku i dinamičku analizu plošnih nosača – **metoda konačnih razlika**, **Rayleigh-Ritz metoda** te **metoda konačnih elemenata**.



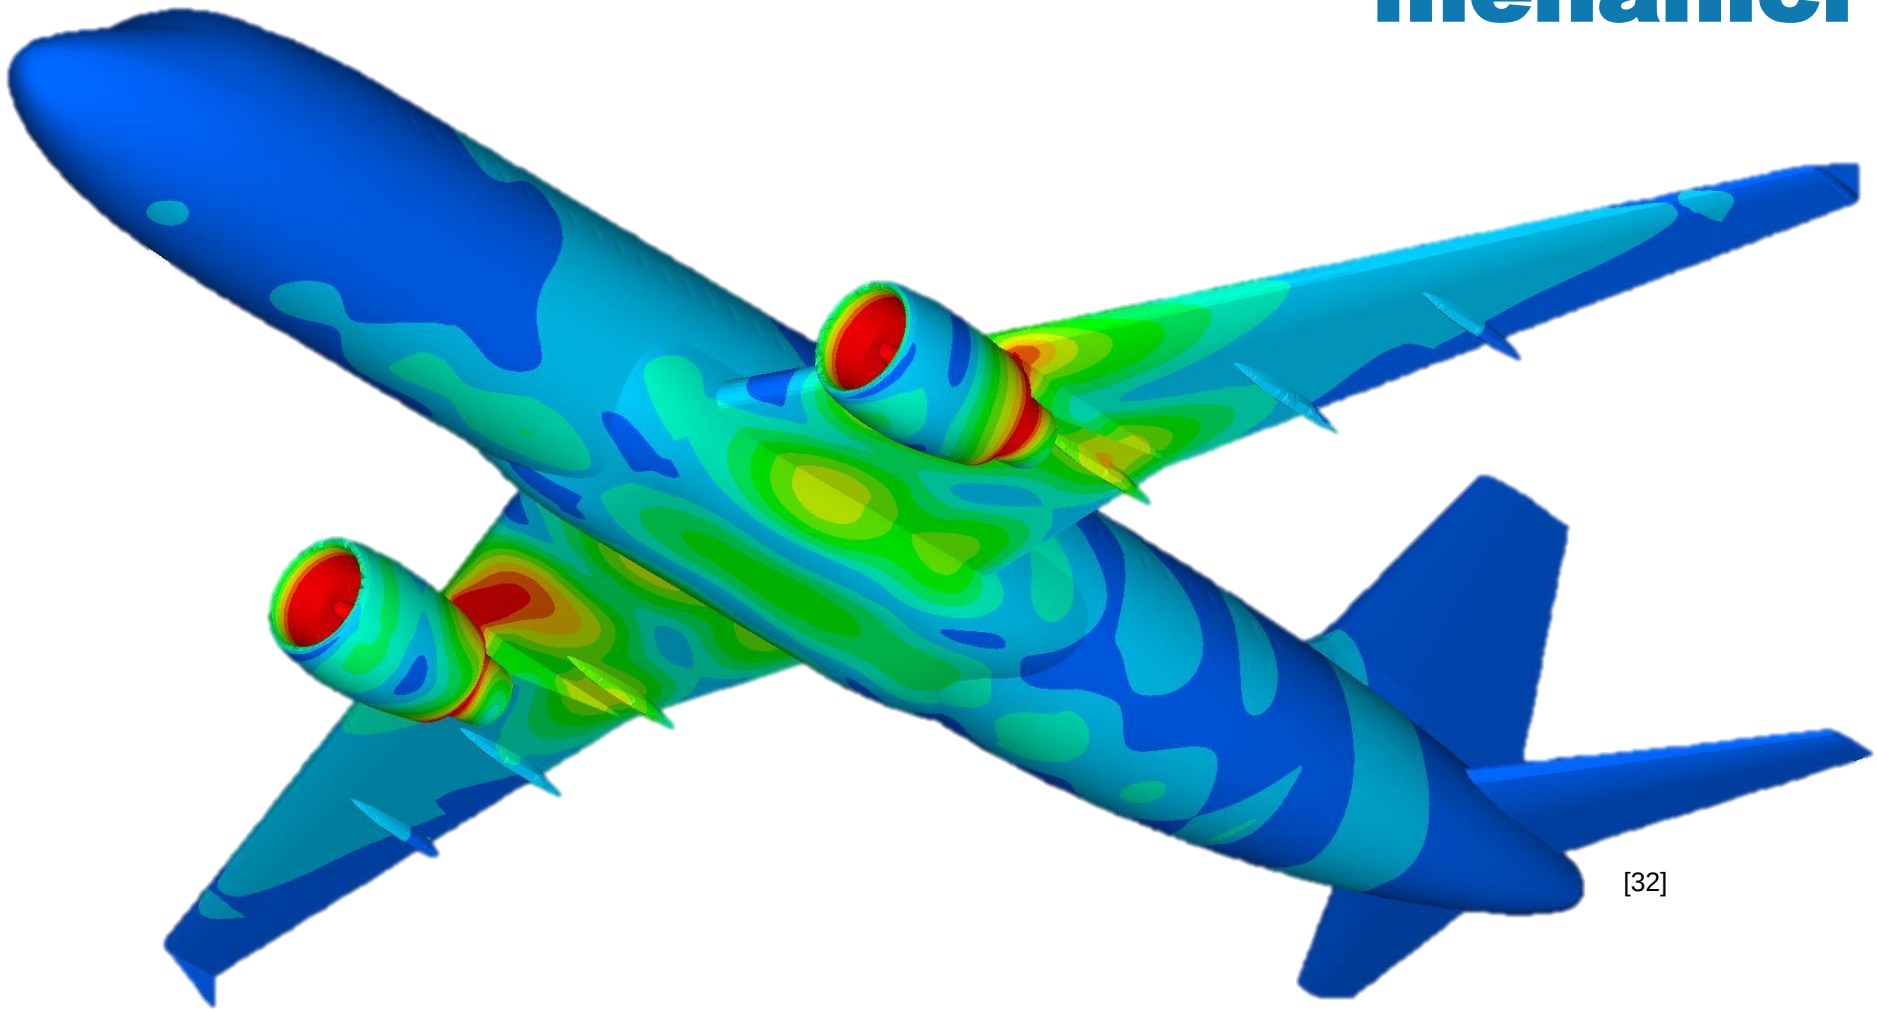
Physikdidaktik, LMU München

[31]



doc. **Teo Mudrić**
teo.mudric2@uniri.hr
G-333

Energetske metode u primijenjenoj mehanici



[32]

Energetske metode u primijenjenoj mehanici

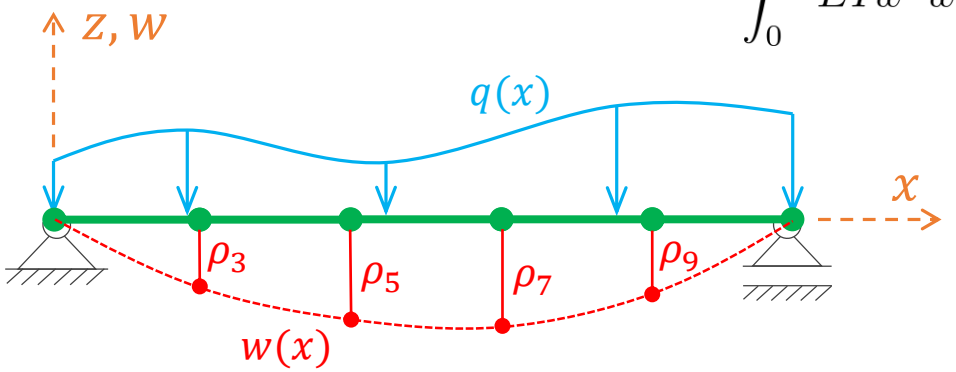
Jaka forma jednadžbe kojom opisujemo problem

$$EIw^{IV} = q$$

$$w(0) = 0$$
$$w(L) = 0$$
$$w''(0) = 0$$
$$w''(L) = 0$$

Slaba forma jednadžbe kojom opisujemo problem

$$\int_0^L EIw''\bar{w}''\,dx - \int_0^L q\bar{w}''\,dx = 0$$

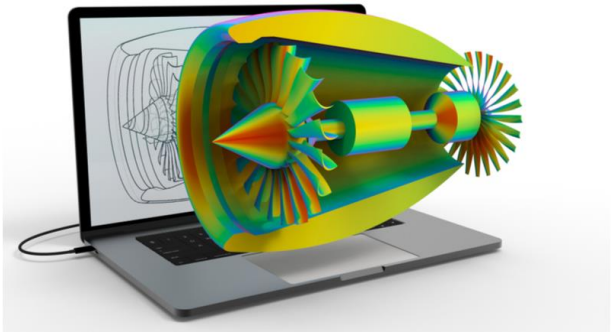


Približno rješenje jednadžbe problema metodom konačnih elemenata

$$\begin{bmatrix} k_{11} & k_{12} & \cdots & k_{1n} \\ k_{21} & k_{22} & \cdots & k_{2n} \\ \vdots & \vdots & \ddots & \\ k_{n1} & k_{n2} & & k_{nn} \end{bmatrix} \begin{bmatrix} \rho_1 \\ \rho_2 \\ \vdots \\ \rho_n \end{bmatrix} = \begin{bmatrix} F_1 \\ F_2 \\ \vdots \\ F_n \end{bmatrix}$$

$$\mathbf{K}\boldsymbol{\rho} = \mathbf{F} \rightarrow \boldsymbol{\rho} = \mathbf{K}^{-1}\mathbf{F}$$

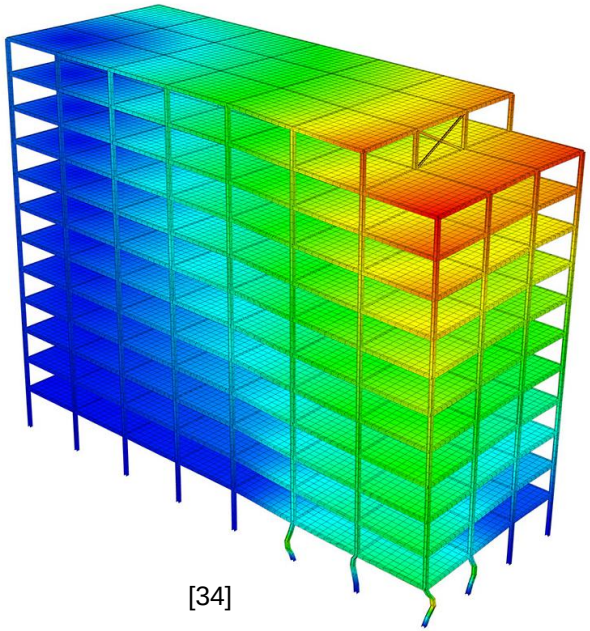
Praktična za implementaciju u računala (Metoda konačnih elemenata)



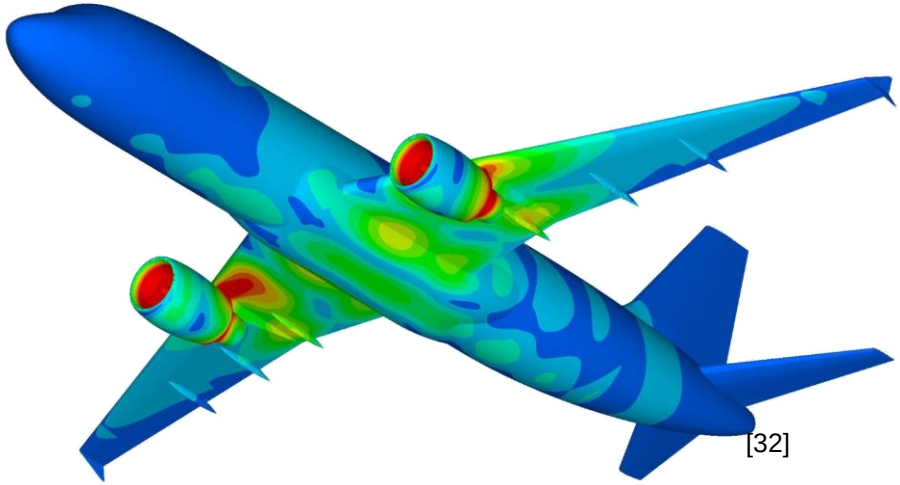
[33]

Biti će opisani postupci za dobivanje približnih rješenja koja zadovoljavaju slabu formu, posebice postupak metode konačnih elemenata

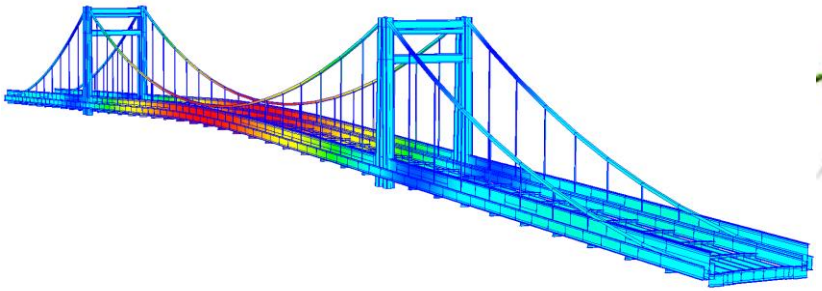
Energetske metode u primijenjenoj mehanici



[34]

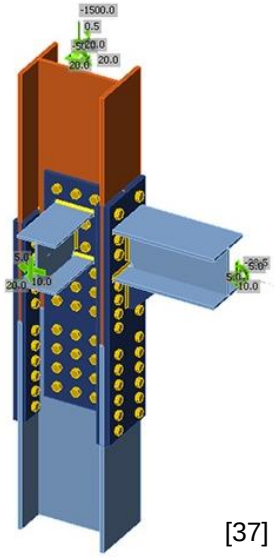


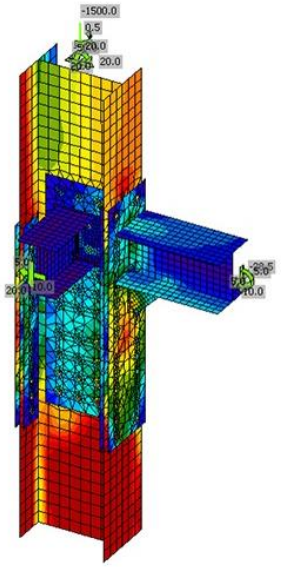
[32]



[35]

[36]

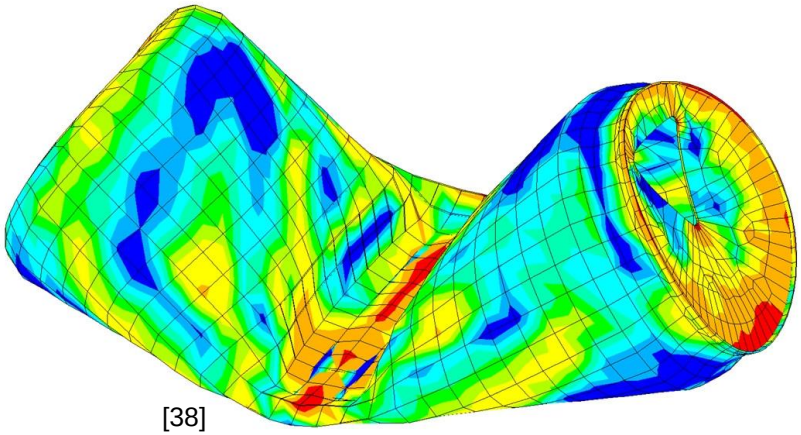




[37]

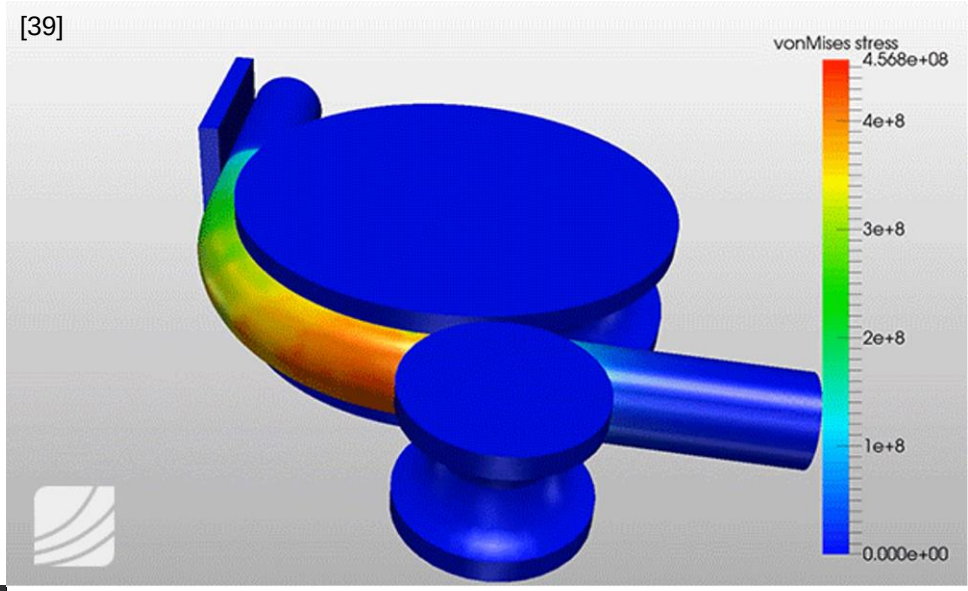
Pomoću softvera koji implementira Metodu konačnih elemenata moguće je analizirati širok spektar kompleksnih mehaničkih problema

Energetske metode u primijenjenoj mehanici

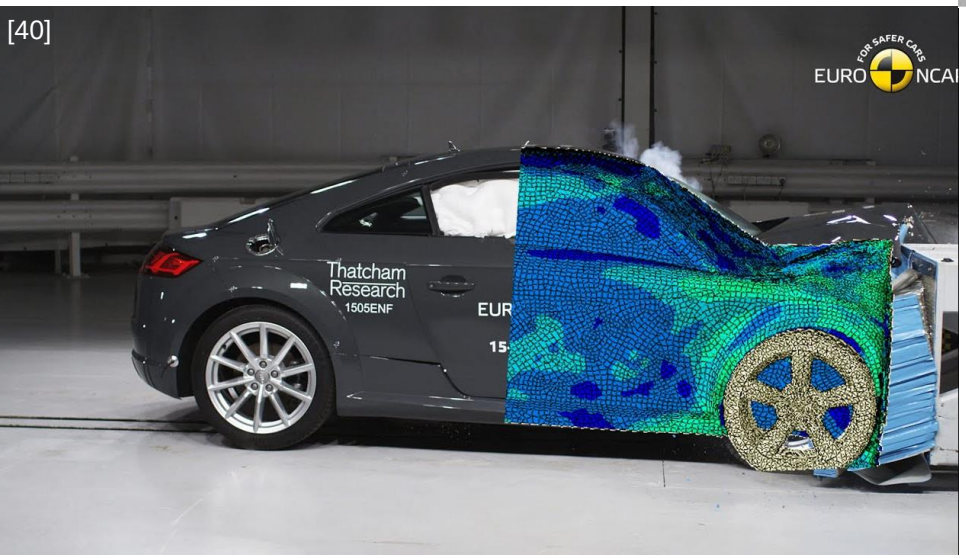


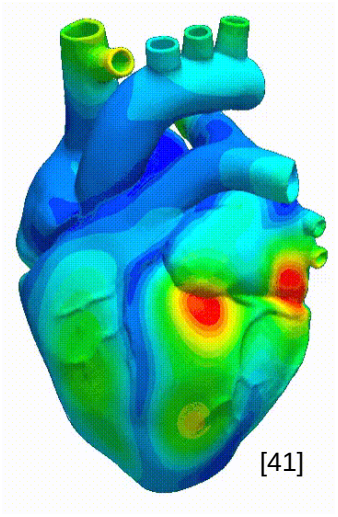
[38]

[39]



[40]





[41]

Pomoću softvera koji implementira Metodu konačnih elemenata moguće je analizirati širok spektar kompleksnih mehaničkih problema

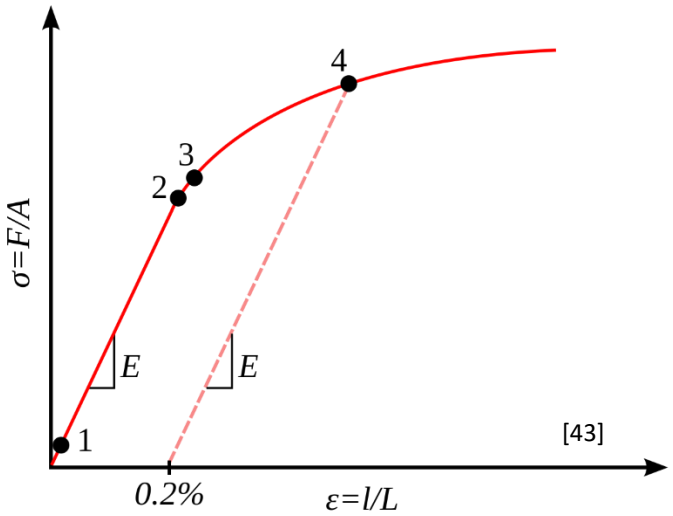
[42]

Uvod u modeliranje plastičnosti i oštećenja

Uvod u modeliranje plastičnosti i oštećenja

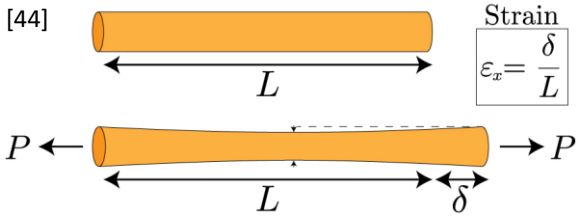
JEDNOOSNO STANJE NAPREZANJA

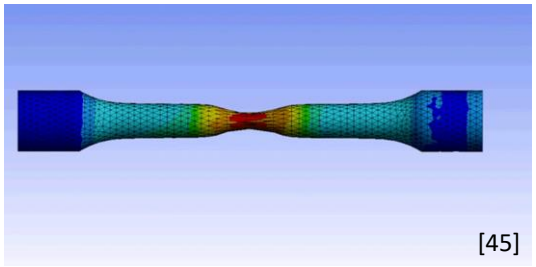
- Plastične deformacije



[43]

[44]

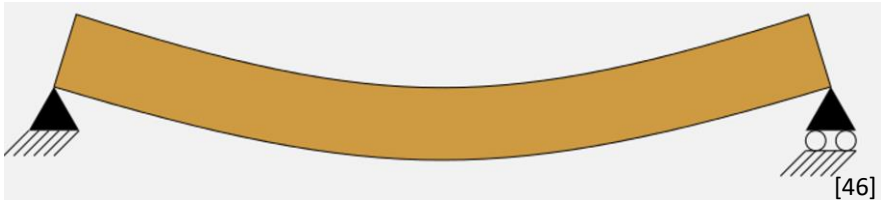




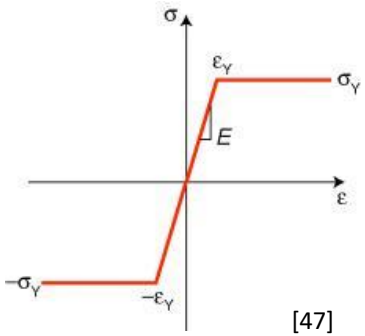
[45]

ELASTO-PLASTIČNO SAVIJANJE

- postepena plastifikacija poprečnog presjeka i otvaranje plastičnog zgloba

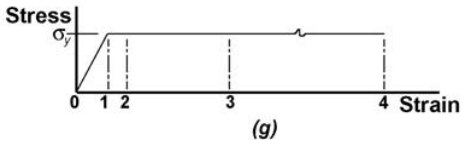


[46]

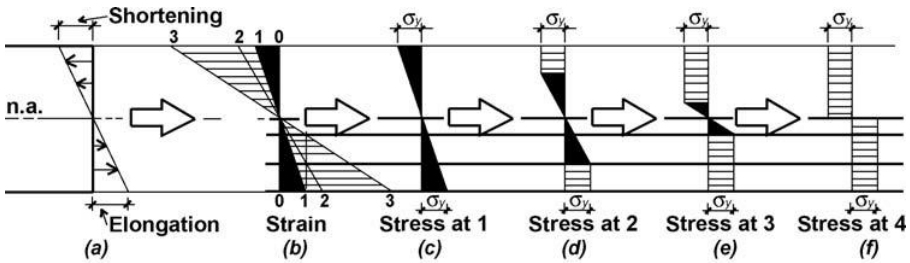


[47]

Prandtlov model



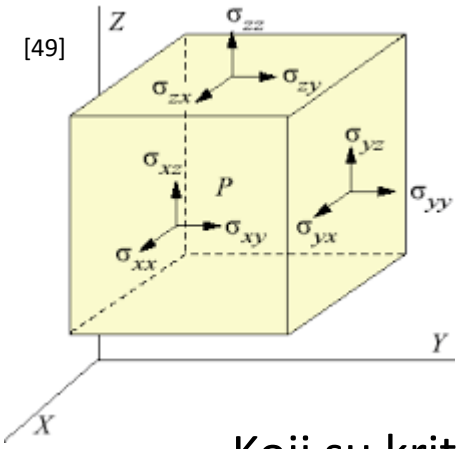
[48]

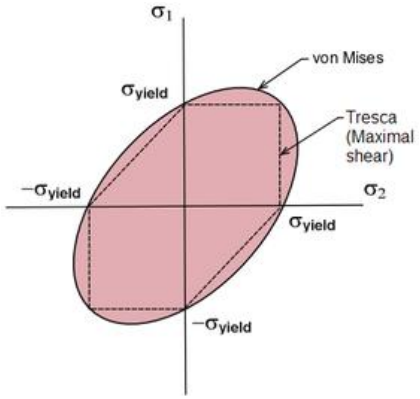


Uvod u modeliranje plastičnosti i oštećenja

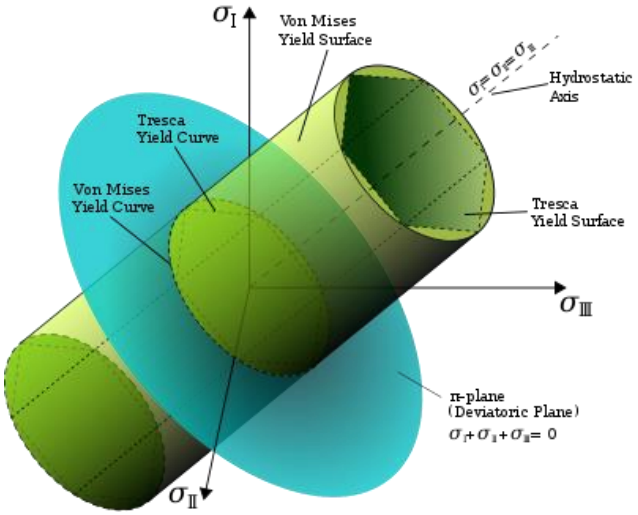
VIŠEOSNO STANJE NAPREZANJA – kada nastupa tečenje/plastifikacija?

[49]



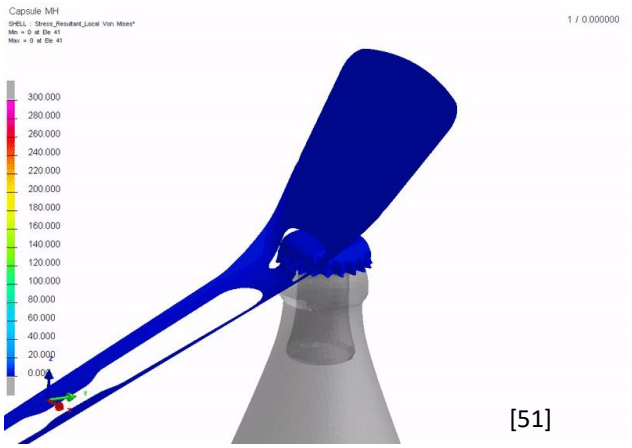


[50]

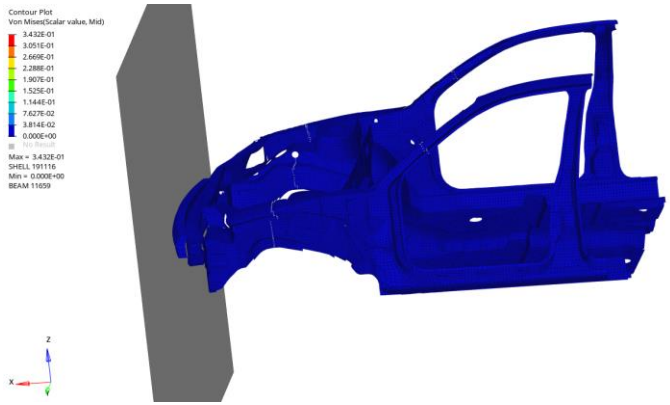


Koji su kriteriji za tečenje/plastifikaciju?

Primjena u računalnim simulacijama



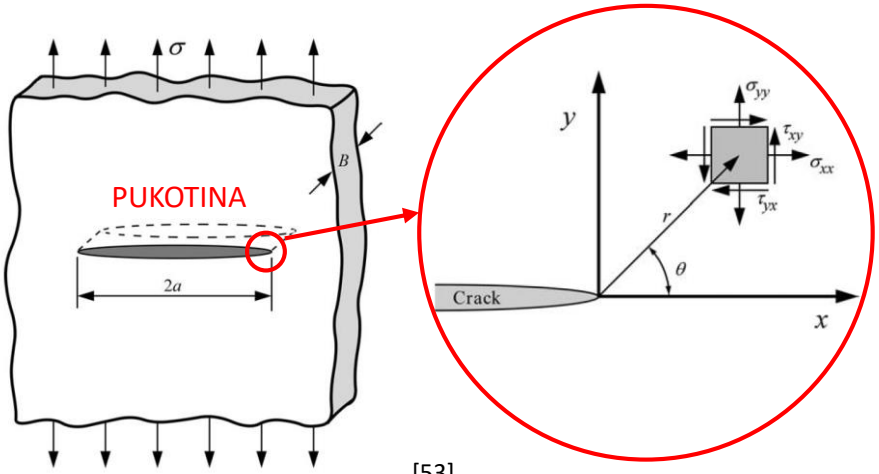
[51]



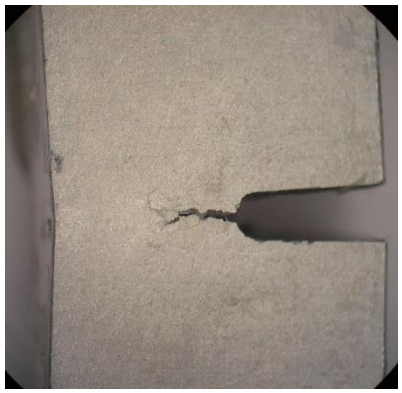
[52]

Uvod u modeliranje plastičnosti i oštećenja

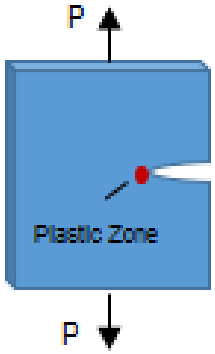
MEHANIKA LOMA – kada i zašto nastaje pukotina u materijalu?



[53]



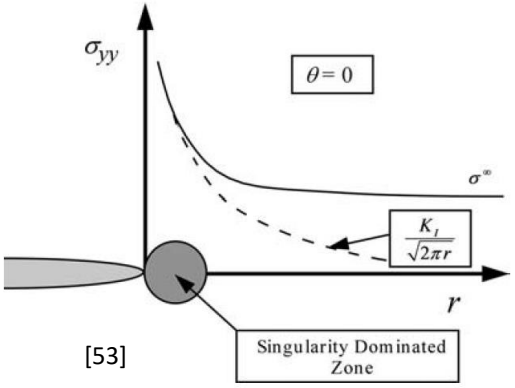
[55]



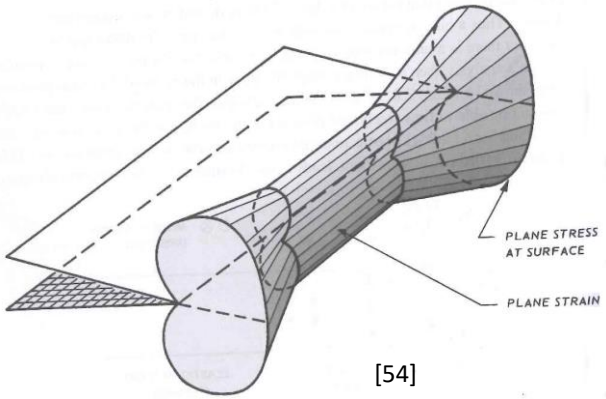
[56]

Linearno-elastična mehanika loma – krti slom materijala

Duktilni slom materijala - iza pukotine formira se plastična zona (oštećenje)



[53]

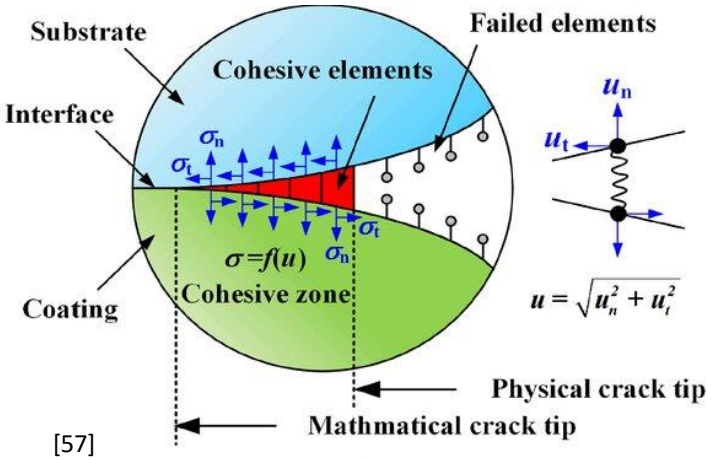


[54]

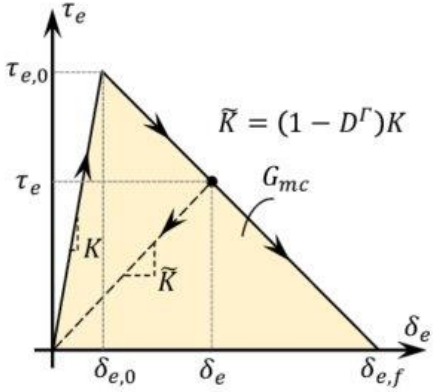
Uvod u modeliranje plastičnosti i oštećenja

MEHANIKA OŠTEĆENJA

- Modeli progresivnog oštećenja (omekšanja) koji dovode do sloma materijala

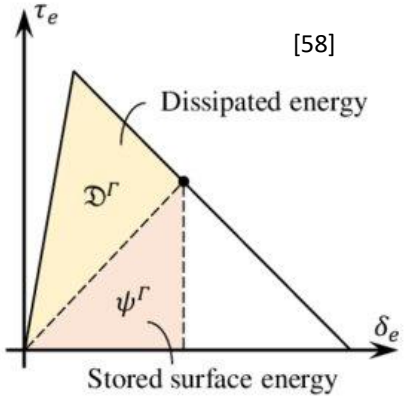


[57]



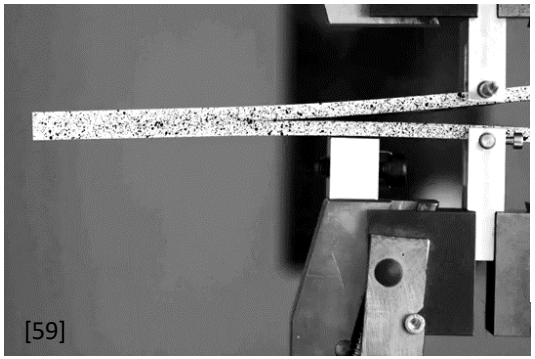
(a) Bilinear cohesive law.

[58]



(b) Energy components.

Eksperimentalno određivanje parametara koji opisuju lomnu otpornost materijala



[59]
